
RISING DEMAND OF LEGAL TECH START-UPS IN INDIA

Akancha Kailash, B.B.A. LLB, Amity University Jharkhand

Introduction

Technology has evolved long enough and has ruled the planet. All sectors of society have become passionate about technology, and the legal field is no exception. Legal technology or commonly referred to as legal technology refers to the use of technology and software to provide legal services, support lawyers by making their work less tiring, help them deliver legal services much more quickly and efficiently, and make legal content more accessible to the general public.

Technology in the legal field has given rise to Legal Tech Start-ups and these Start-ups are the companies that use technology and software as a method of delivering all legal business through their online platform. Legal technology is rapidly moving from a standard sector to becoming a major sector within the traditional legal industry. The evolution of technology is the major reason for the formation of forensic technology start-ups in India. The motive of these legal tech start-ups is to change the normal procedural ways of working followed by lawyers and other legal professionals, with nascent things being driven by technology. Today's modern technological system has enabled lawyers to try to do their job more accurately and efficiently and has thus benefited the general public.

Covid-19 and Legal Tech

The unprecedented coronavirus outbreak has affected the global economy. With social distancing being the only reason to curb the spread of the disease within society, the work culture around the world has gone into network mode. The pandemic has spared no sector of society, including the judiciary. Covid19 has caused disruption within the system, the outdated version of dispensing justice and providing legal services. Traditionally, the quality process had to physically appear in court to hear your question. However, the pandemic has forced the profession to rely on technology, for example by holding virtual hearings or video conferences where lawyers and lawyers can appear online for their case while seated in their comfortable spaces. Lawyers also have the advantage of holding meetings with their clients and providing solutions to their clients online. The pandemic has transformed the way legal professionals and

lawyers work. offered better opportunities to digitally transform legal businesses. Law schools have also gone digital and moved to online teaching and students have adapted to online learning. Technology has not only stayed with top legal organizations, but also smaller law firms and legal tech start-ups have invested alike. The pandemic has played a significant role and provided a serious opportunity for legal technology start-ups to provide legal assistance in all possible aspects. The pandemic has forced the legal sector to promote and move towards digital transformation and as a result, the sector has streamlined for the better.

Legal Tech

Legal technology has increased in recent years and has facilitated the addition of the regular legal sector. Whether it's virtual hearings, online courts, or computer-based (AI) legal research, technology has certainly transformed every aspect of standard law. Legal Tech and Indian Judiciary

India's judiciary was slowly moving towards digitalization and implementation of technology in the system when the Supreme Court allowed live streaming of swearing-in ceremonies and farewell speeches of judges. Judge AM Khanwilkar and Judge Dr.D.Y.Chandrachud authorized the live broadcast of cases deemed to be of national and constitutional importance. Due to the pandemic, the judiciary has taken the virtual route to review issues and dispense justice. As the technology creates a paperless environment, therefore, it provides judges with the opportunity to hear and determine the facts of the case with all precedents and judgments online in a fair, reasonable, efficient and timely manner, thus improving the administration of the judicial system. The Supreme Court is currently using the "Vidyo" platform to conduct virtual hearings. In July 2021, Justice Chandrachud declared that all Supreme Court justices would be equipped with 1000 Mbps internet connection speed to avoid the disruptions they would normally face. Even during a pandemic crisis, technology has ensured that justice is not hindered and with the help of technology, India's legal system is bound to thrive.
